SmartLab Toys are Safe

BELLEVUE, WA (September 2007)—In light of the recent recalls of major-label toys manufactured in China, SmartLab is confident its line of educational and science-based toys is safe for kids, as each product and kit component is subjected to rigorous safety testing and checks even before mass production begins.

“At SmartLab, we put our toys through an exhaustive protocol of testing at all levels of development and production to ensure they are safe for kids,” says Jim Becker, Founder and President of SmartLab Toys.

As with all toy manufacturers, SmartLab is responsible for meeting the required safety standards established by individual countries—ASTM, CAN, CE and AUS. Working in partnership with its manufacturers, SmartLab has implemented preliminary testing throughout the development process of all products. This includes testing and approval of raw materials such as paint, clay, even the screws that secure battery compartments.

SmartLab is cognizant of the fact that parents and teachers are concerned about the safety of toys they purchase for children. SmartLab is happy to answer any further questions that may arise during this uneasy time in the toy industry to reassure consumers and retailers that they can purchase SmartLab toys with confidence.
