

ENTER THE SMARTZONE! TIME TO PLAY

1

Check out the night sky!
Turn the star map so
the direction you are
facing is shown at
the bottom of
the page.

2

Locate the **Brightest Stars**
in a constellation. They are
marked in **red** on the map.
Then look at the lines on the
star map to help you find
the other stars in the
CONSTELLATION.

3

The Earth is turning all the
time, so the stars and planets
will never appear in the same
place two nights in a row, or
two months in a row.

Check our website in March
for a new star map.
